A PROJECT REPORT ON Web Development

SUBMITTED BY

UNDER THE GUIDANCE OF

NAME: YAMUNA RAMCHLARY

SWEET HAZARIKA

DATE OF SUBMISSION:

STUDENT SIGN:

Introduction to Web Development

What is Web Development?

Web development refers to the process of creating websites and web applications for the internet or an intranet (a private network). It encompasses a variety of tasks, including web design, web content creation, client-side/server-side scripting, and network security configuration, among others. Web development can range from developing a simple static page of plain text to complex web applications, electronic businesses, and social network services.

Key Components of Web Development

1. Frontend Development:

- **HTML (HyperText Markup Language):** The standard language for creating web pages and web applications. It provides the basic structure of a site.
- **CSS (Cascading Style Sheets):** A language used to describe the style of an HTML document. CSS describes how HTML elements should be displayed.
- **JavaScript:** A programming language that enables interactive web pages. It is an essential part of web applications, allowing
- dynamic content to be executed on the client side.

2. Backend Development

- **Server-Side Languages:** Such as PHP, Python, Ruby, Java, and Node.js. These languages interact with the server to process and manage data.
- **Databases:** Systems like MySQL, PostgreSQL, MongoDB, and SQLite store and manage data.

Why Learn Web Development?

Web development skills are highly sought after in today's digital age. They open up a wide range of career opportunities, including roles as web developers, full-stack developers, frontend or backend developers, and more. Understanding web development also empowers individuals to create their own projects, from personal blogs to complex web applications.

Project Overview:

In this project, I will build a personal portfolio website. This website will showcase my skills, projects, and resume. The project will help me apply my knowledge of HTML, CSS, JavaScript, PHP and MySQL Database .

Here is the step-by-step process of the project:

Step 1. Make a Front Page of a Website using HTML code.

[index.php]

```
<!DOCTYPE html>
<html lang="en">
<head>
  <meta charset="UTF-8">
  <meta name="viewport" content="width=device-width, initial-scale=1.0">

```

Step 2. For styling link this css .

[style1.css]

```
.container {
    position: relative;
    text-align: center;
    color:white;
    display:flex;
    background-color:brown;
    font-family:Bodoni MT Black;
}

.centered {
    font-family:Rockwell Extra Bold;
    font-size:30px;
    color:white;
    font-family:Comic Sans MS;
    position: absolute;
    top: 50%;
    left: 50%;
    transform: translate(-50%, -50%);
}

.name{
```

```
align:center;

height: 200px;

width: 100%;

background-color: lightgreen;

color:red;

font-family:Goudy Stout
}

.studentimg{

height:400px;

width:100%;

float:right;

}

.container1{

display:flex;

font-size:30px;

position: relative;

text-align: center;

}

.container2{

display:flex;

font-size:15px;

position: relative;

text-align: center;

}

.container3{

width:90%;

height:90px;
```

```
display:flex;

font-size:15px;

position: relative;

text-align: center;

padding-top:40px;

padding-bottom:70px;

}
```

```
.container4{

width:90%;

height:90px;

display:flex;

font-size:15px;

position: relative;

text-align: center;

padding-bottom:70px;

}
```

```
.container5 {

width:90%;

height:90px;

display:flex;

font-size:15px;

position: relative;

text-align: center;

padding-bottom:70px;

}
```

```
.container6 {

display:flex;
```

```
position: relative;

text-align:center;
}

.container7{

display:flex;

position: relative;

text-align:center;

height:300px;

width:60%;

}

.container8

{ display:flex;

position: relative;

    background-color: #0064bd;

    box-shadow: none;

}

}
```

*

{text-decoration:none;}

Step 3: Here we create a php file to insert our data into database ->

Step 1: Create the MySQL Database and Table:

- Access MySQL database using a tool like phpMyAdmin or the MySQL command line.
- Create a new database " project".
- Within this database, create a table "students" to store the form data, specifying appropriate columns (name, father, mother, dob, gender, email, phone, stream, subjects, passyr, passschool)

Step 2: Create the HTML page for Admissin page and link it with "Apply Now" button in "index.php" file.

[project.php]

<!DOCTYPE html>

<html lang="en">

<head>

<meta charset="UTF-8">

<meta name="viewport" content="width=device-width, initial-scale=1.0">

<title>ABC NATIONAL COLLEGE admission form </title>

<link rel="stylesheet" href="style.css">

</head>

<body>

<?php

\$host = "localhost";

\$username = "root";

\$password = "";

\$db_name = "project";

// Create connection

\$link = mysqli_connect(\$host, \$username, \$password, \$db_name);

// Check connection

if (!\$link) {

```

        die("Error Connecting to MySQL server: " . mysqli_connect_error());

    }

    if(isset($_POST['submit'])) {

        $name = $_POST['name'];

        $father = $_POST['father'];

        $mother = $_POST['mother'];

        $dob = $_POST['dob'];

        $gender = $_POST['gender'];

        $email = $_POST['email'];

        $phone = $_POST['phone'];

        $stream = $_POST['stream'];

        $subjects = $_POST['subjects'];

        $passyr = $_POST['passyr'];

        $passschool = $_POST['passschool'];

        if($name != "" && $father != "" && $mother != "" && $dob != "" && $gender != "" && $email != "" && $phone != "" && $stream != "" && $subjects != "" && $passyr != "" && $passschool != "") {

            $stmt = $link->prepare("INSERT INTO students (name, father, mother, dob, gender, email, phone, stream, subjects, passyr, passschool) VALUES (?, ?, ?, ?, ?, ?, ?, ?, ?, ?)");

            if ($stmt === false) {

                die("Prepare failed: " . $link->error);

            }

            // Bind parameters (use "ssssssssss" for 11 string parameters)

            $stmt->bind_param("ssssssssss", $name, $father, $mother, $dob, $gender, $email, $phone, $stream, $subjects, $passyr, $passschool);

            if($stmt->execute()) {

                echo "Updated successfully!";

            } else {

                echo "There is a problem in database: " . $stmt->error;
            }
        }
    }

```

```

    }

    $stmt->close();

} else {

    echo "All fields are required.";

}

}

mysqli_close($link);
?>

```

Step 4: Link this css file to [project.php] for styling the form

[style.css]

```
input, textarea{  
  
    border: 2px solid black;  
  
    border-radius: 6px;  
  
    outline: none;  
  
    font-size: 16px;  
  
    width: 80%;  
  
    margin: 11px 0px;  
  
    padding: 8px;  
  
}  
  
.bg{  
  
    width: 100%;  
  
    height: 250%;  
  
    position: absolute;  
  
    z-index: -1;  
  
    opacity: 0.6;  
  
}
```

```
*{

  margin: 0px;

  padding: 0px;

  box-sizing: border-box;

  font-family: 'Roboto', sans-serif;

}

.container{

  max-width: 80%;

  padding-left: 30px;

  margin: auto;

  font-size: 20px;

}

.container h1 {

  text-align: center;

  font-family: 'Sriracha', cursive;

  font-size: 40px;

}

p{

  font-size: 17px;

  text-align: center;

  font-family: 'Sriracha', cursive;

}

form{

  display: flex;

  align-items: center;

  justify-content: center;

  flex-direction: column;
```

```
}

.profile-img {

    width: 150px;

    height: 150px;

    border: 2px solid black;

    border-radius: 5px;

    object-fit: cover;

}

input[type="file"] {

    display: none;

}

.upload-btn {

    padding: 8px 15px;

    color: #0b0b0b;

    border: none;

    cursor: pointer;

}

button{

    width:200px;

    color: white;

    background: purple;

    padding: 8px 12px;

    font-size: 20px;

    border: 2px solid white;

    border-radius: 14px;

    cursor: pointer;

}
```

Outcome: Here is the outcome of this project.

The screenshot displays the phpMyAdmin web interface in a browser. The address bar shows the URL: `localhost/phpmyadmin/index.php?route=/sql&pos=0&db=project&table=students`. The interface includes a sidebar with a database tree on the left and a main content area on the right. The main area shows the 'students' table with a message: 'Showing rows 0 - 5 (6 total, Query took 0.0134 seconds.)'. Below this, a SQL query is displayed: `SELECT * FROM `students``. A toolbar with various actions like 'Browse', 'Structure', 'SQL', 'Search', 'Insert', 'Export', 'Import', 'Privileges', 'Operations', 'Tracking', and 'Triggers' is visible. The table data is presented in a grid with columns: `sno`, `name`, `father`, `mother`, `dob`, `gender`, `email`, `phone`, `stream`, `subjects`, `passyr`, and `passsch`. Four rows of student data are visible. At the bottom, there are controls for 'Check all', 'With selected', 'Edit', 'Copy', 'Delete', and 'Export'.
